ACPA · TREINAMENTO DE CONFERENTES VISUAIS

Classificação de perfis e chapas de alumínio

Família → Tipo → Formato → Construção: um idioma único, independente de fornecedor.

Regra de ouro: nunca classificar por tamanho

Olhamos para

- Família: a natureza da seção
- Tipo: que peça é
- Formato: o contorno geral
- Construção: os detalhes que separam as vizinhas

Nunca consideramos

- Cotas e medidas desenhadas
- Espessura e peso por metro
- Código ou nome do fornecedor
- Marca d’água da imagem

Quatro perguntas, sempre nesta ordem

1. FAMÍLIA

Maciça, tubular, aberta ou chapa?

Ex.: Perfil Aberto

2. TIPO

Que peça é?

Ex.: Canal

3. FORMATO

Qual o contorno geral?

Ex.: U

4. CONSTRUÇÃO

Que detalhe a separa das vizinhas?

Ex.: Com Encaixes

Chapas usam só três níveis: Família, Tipo e Formato.

As quatro famílias

Perfil Aberto

Sem câmara fechada: L, U, T, Z, esquadrias. 116 classes.

Perfil Tubular

Uma ou mais câmaras fechadas. 76 classes.

Perfil Sólido

Seção maciça, sem vazios. 21 classes.

Chapa

Produto plano laminado: chapa, placa, telha. 11 classes.

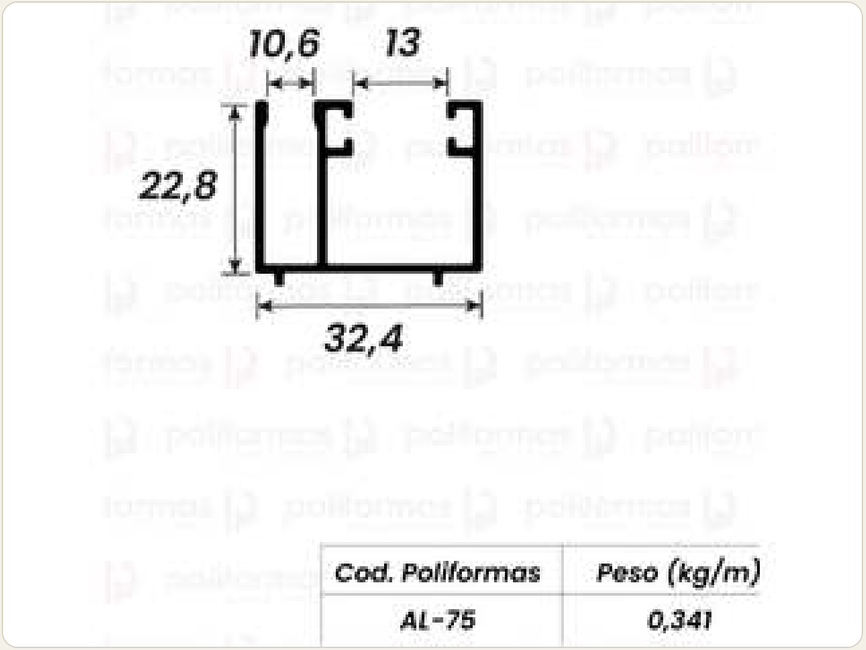

Como ler o nome de uma imagem

```
PerfilAberto_Canal_U_ComEncaixes_17.jpg
```

PerfilAberto	**Canal**	**U**	**ComEncaixes**	**17**
família	tipo	formato	construção	nº da imagem

Sem acentos, sem aspas e sem dimensões. Classes com uma só imagem não levam número.

Exemplo guiado: Canal U Com Encaixes

Cod. Poliformas	Peso (kg/m)
AL-75	0,341

1. **Família:** sem câmara fechada, então Perfil Aberto
2. **Tipo:** calha com abertura, então Canal
3. **Formato:** contorno em U
4. **Construção:** ganchos de montagem nas abas, então Com Encaixes

As cotas da imagem são ilustrativas e não entram na classificação.

Tipos mais frequentes por família

Família	Tipos (classes)
Perfil Aberto	Canal (39) · Perfil (20) · Arremate (15) · Painel (14) · Cantoneira (7) · Arco (4)
Perfil Tubular	Tubo (50) · Montante (20) · Soleira (2) · Estrutural, Moldura, Tampa (1)
Perfil Sólido	Barra (13) · Perfil (4) · Batente (3) · Viga (1)
Chapa	Telha (3) · Lisa, Xadrez, Perfurada, Expandida, Gravada, Decorativa, Composta, Curva (1)

O número entre parênteses é a quantidade de classes do tipo, não de imagens.

Chapas: três níveis

Tipo	Formato	Como reconhecer
Lisa	Plana	Superfície lisa, sem desenho
Xadrez	Plana	Relevo antiderrapante
Perfurada	Plana	Furos regulares
Expandida	Plana	Malha em losangos
Telha	Ondulada, Trapezoidal, Nervurada	Seção conformada em ondas
Curva	Calandrada	Chapa curvada em cilindro

Também existem Gravada, Decorativa e Composta, cada uma com uma classe.

Três armadilhas comuns

Cotas na imagem

Medidas desenhadas não classificam. Ignore-as.

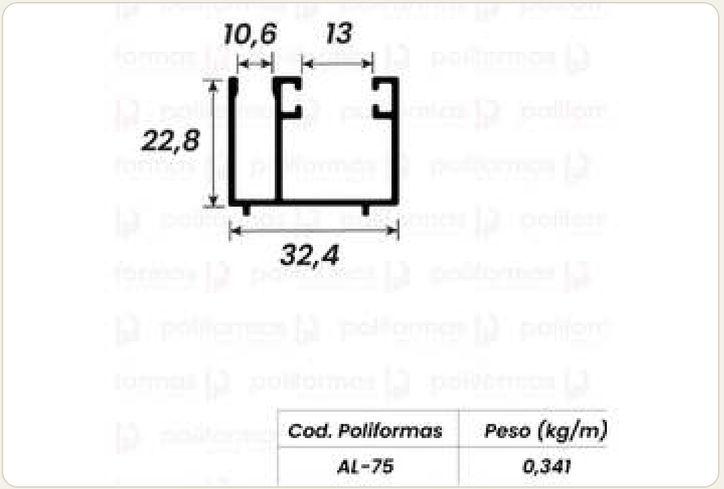

Marca d’água

Logos e códigos de fornecedor não fazem parte do desenho.

Palpite

Na dúvida, consulte o guia e um colega antes de decidir.

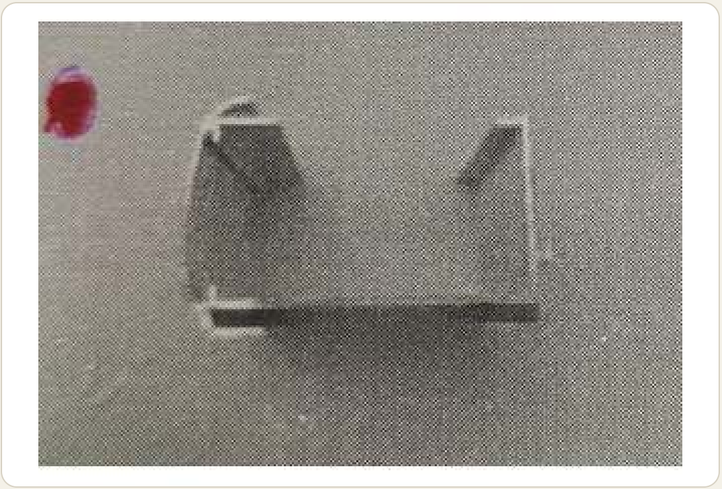

Vizinhas parecidas: o que muda é a construção

Cod. Poliformas	Peso (kg/m)
AL-75	0,341

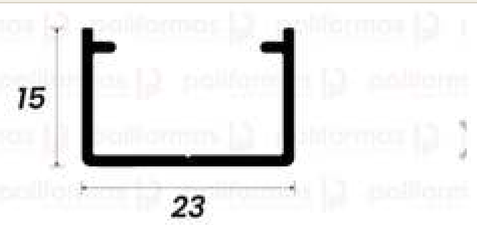

Canal U Com Encaixes

ganchos de montagem

Canal U Abas Curvas

abas curvas

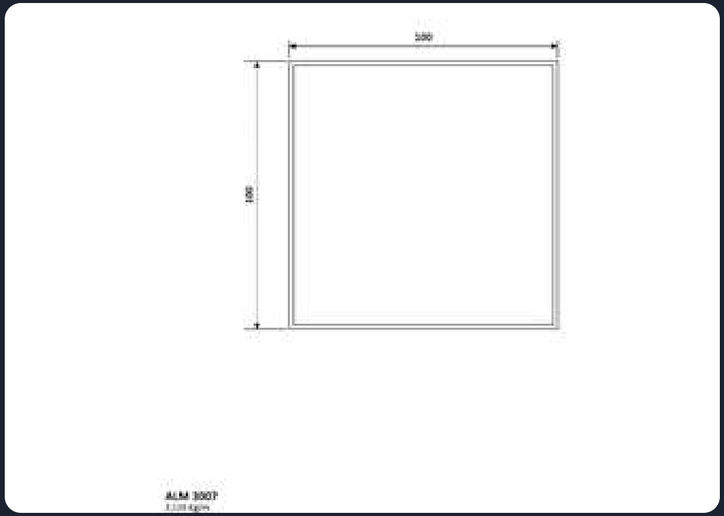

Cod. Poliformas	Peso (kg/m)
MX-129	0,178

Canal U Raso

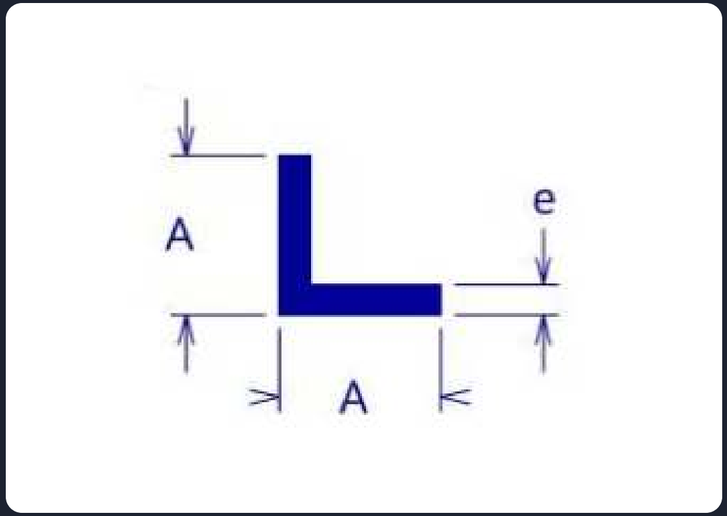

pouco profundo, abas baixas

Mesmos família, tipo e formato; só a construção separa as três.

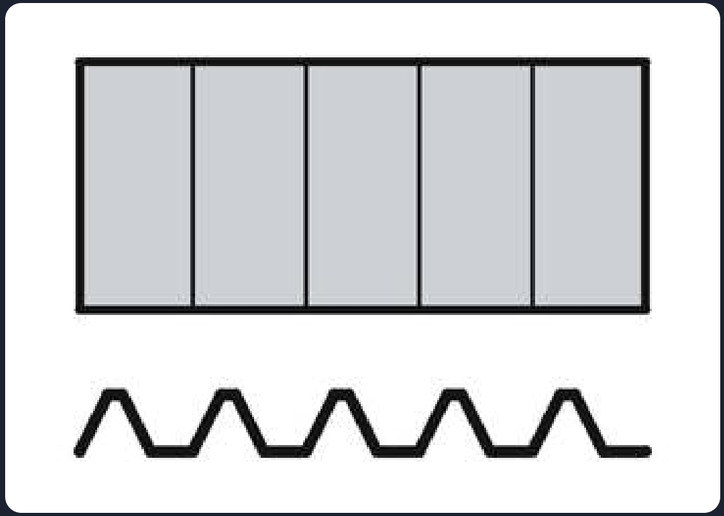

Exercício: classifique A, B e C

A

B

C

Responda: família, tipo, formato e construção.

Gabarito

Item	Família	Tipo	Formato	Construção
A	Perfil Tubular	Tubo	Quadrado	Simples
B	Perfil Aberto	Cantoneira	L	Abas Iguais
C	Chapa	Telha	Trapezoidal	(sem 4º nível)

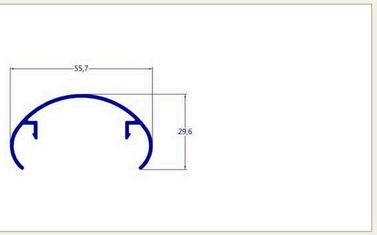

Quem errou: em qual nível a resposta divergiu? Quase sempre é a família (há câmara fechada?) ou a construção.

Fluxo de decisão do conferente

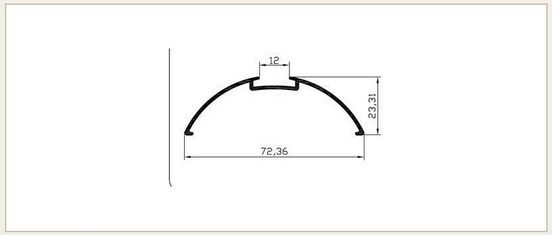

1. Ignore cotas, marcas d’água e códigos.
2. Há câmara fechada? Defina a família.
3. Que peça é? Defina o tipo.
4. Qual o contorno? Defina o formato.
5. Que detalhe a separa das vizinhas? Defina a construção.

Dúvida? Consulte o Guia interativo ou a ficha da classe no Caderno em PDF.
